

# HACCP PROCEDURE for CO2 transportation offshore

Traceability is a key element especially in the food industry. Not only to guarantee quality and safety of the product but also to build trust towards the customers. However, due to the numerous actors involved in the logistic chain, from the moment your CO2 container arrives at the export terminal to the moment it is delivered at destination, tracking has become a real challenge. Among all the risks that may incur to the shipment, pollution, contamination and wrong

manipulation are the most critical ones. Following the IMDG rules and the HACCP risk analysis method, Cryologistics will offer the services that guarantee your product traceability and minimize those risks.

## OUR SOLUTION

### Checks

- ☒ Technical inspection of the tank before loading
- ☒ Hose purge before loading
- ☒ Documentation as per IMDG Code

### Certification

- ☒ Certified driver for loading operations
- ☒ Certified sources
- ☒ Product analysis before and after loading

### Traceability

- ☒ Pictures before after loading
- ☒ Report via email
- ☒ Telemetry system on chassis for RORO operations (optional)
- ☒ Set of seals provided for the way and back of the container.
